Without clear

div1	div2 - Notice that div2 is after div1 in the HTML code. However, since div1 floats to
	the left, the text in div2 flows around div1.

With clear

 ${
m div}4$ - Here, clear: left; moves ${
m div}4$ down below the floating ${
m div}3$. The value "left" clears elements floated to the left. You can also clear "right" and "both".
